

Decking Calculator User Guide

For our Rinato™ Deck Boards

1. Select your style and colour
2. Enter the length of deck for the long side of the boards (*Remember that the length of the boards is usually 90 degrees to the joists.*)
3. Enter the width of the deck which is the side with the ends of the boards.
4. N.B. Either the length or the width can be longer .

Length (*always along the length of the boards*)

Width (*always along the edges of the boards*)

Dia. 1

5. Choose the gap you want between the boards. This is usually 7mm which helps drainage. However, if you prefer to reduce this gap, we offer a clip for an approximate 1.5mm gap.
6. The calculator will automatically round to the nearest full board to avoid cutting along the whole length of a board or adding very small lengths. If you want to cut down to the exact size you will receive enough boards to do that.
7. Decide if you want to add extra boards to allow for off-cuts. This is typically between 5% and 10%. For diagonal boards we suggest adding 15% extra.
8. Our calculator will then calculate the total number of boards*, starter clips and double clips you will need and email them to you.

*N.B. Quantities are calculated depend on the deck measurements and board lengths and some waste material may be generated. Please check that you are happy with the

amounts before placing an order. We also offer an option to allow for the wastage generated when boards are cut to size. People usually allow between 5% - 10% extra.

Important Notes:

- At present we cannot calculate the number of starter boards you will need as you may require them on any number of sides. Please simply add the lengths of the sides you need and note that the starter boards for **Natural** are 3.66 metres long, whilst for **Victoria** they are 3.6 metres long. You may also require the same total length fewer of the matching deck boards. **Classic** does not have a range of starter boards.
- Matching fascia boards are available for all three ranges. The starter and fascia boards for **Natural** are 3.66 metres long and are available in the wood grain textured finish. The started boards for **Victoria** are 3.6 metres long. The fascia boards for **Victoria** and **Classic** boards are 2.4 metres long.
- Please note that if you chose to run your boards diagonally you will require approximately an extra 15% boards to allow for waste material, and your joists will need to be set a minimum of 100mm closer than normal.
- If you require any assistance or wish to place an order, please contact us on 01708 398 020, or e-mail info@liveconfigurator.co.uk
- You can also visit: <https://rinatoboard.co.uk/> where you can also order free samples.

For our Synergised™ Decking System

1. Select your colour
2. Enter the length of deck for the long side of the boards (*See Dia. 1. Please remember that the length of the boards is usually 90 degrees to the joists.*)
3. Enter the width of the deck which is the side with the ends of the boards. Either measurement can be longer.
4. The Synergised™ clips allow for 5 mm gaps between the boards.
5. You can select board end caps for one end or both ends.
6. If you require any assistance or wish to place an order, please contact us on 01708 398 020 or email: info@liveconfigurator.co.uk

Our calculator will then calculate the total number of boards*, starter clips, double clips, joining plates, and end caps you require.

*Quantities are calculated depend on the deck measurements and board lengths and some waste material may be generated. Please check that you are happy with the amounts before placing an order. We also offer an option to allow for wastage when

boards are cut to size. People usually allow between 5% - 10% extra. For diagonal boards we suggest adding 15% extra.

Notes:

- We have matching aluminium subframe and adjustable support cradles available. For further information please contact us on 01708 398 020 or email: info@liveconfigurator.co.uk or visit: <https://aluminiumdecks.co.uk/> where you can also see our Porcelain Tiles system or order free samples.

As part of our continuing development, we hope to create a full deck configurator for all our systems in the future.
